

### Management chart for influenza (flu) vaccination in egg allergic individuals

Individuals with an allergy to egg or egg proteins may be at increased risk of adverse reaction to some flu vaccines. Inactivated flu vaccines that have no or a very low ovalbumin content (<math><0.12\ \mu\text{g}/\text{ml}</math> – equivalent to <math><0.06\ \mu\text{g}</math> for a 0.5ml dose) are available and studies show that they may be used safely in individuals with egg allergy ([Green Book chapter 19](#)).

This management chart may be a useful aid to clinical decision making.

Influenza vaccines for 2023/24 Ovalbumin content chart can be found here:

<https://www.gov.uk/government/publications/influenza-vaccines-marketed-in-the-uk>

Always check Summary of medical Product Characteristics (SmPC) to ensure vaccine suitability on an individual patient basis. SmPCs are available here: <https://www.medicines.org.uk/emc/>

The Green Book Chapter 19 – Influenza contains additional content on egg allergy and flu vaccine advice.
