

Vaccine Uptake in Children in Wales October to December 2018

COVER 129: Wales February 2019

Key points

- For children at one year of age in Wales, uptake of all routine immunisations, apart from rotavirus, remained above 95% this quarter. Uptake of three doses of the “6 in 1” vaccine was 95% or higher in four of the seven Health Boards (HB) and in 15 of 22 Local Authority (LA) areas.
- Uptake of the complete three-dose course of MenB vaccine in two year olds was 93.9% this quarter. Three HBs and eleven LA areas had an uptake above 95%.
- Uptake of the first dose of MMR vaccine in two year old children was 94.3% this quarter. Three HBs and nine LA areas achieved an uptake of 95% or over.
- The proportion of children up to date with all routine immunisations by four years of age was 88.3% this quarter and was 90.5% in five year olds.
- Uptake of one dose of HPV vaccine in 2017-18 school year 8 girls (12-13 year olds) is currently 2.2%. In girls in the 2017-18 school year 9 (13-14 year olds), uptake of two doses is currently 1.9%. Vaccination sessions had just started in these age-groups at time of reporting and uptake will increase over the next three quarters as more immunisation sessions take place.
- Uptake of routine MenACWY vaccine in the 2018-19 school year 9 cohort is currently 9.3%, this will increase in coming months as more vaccination sessions take place. Coverage of the MenACWY vaccine in the 2018-19 school year 10 cohort was 83.0%.
- Uptake of the Td/IPV teenage booster in the 2018-19 school year 9 cohort is currently 9.7%, this will increase in coming months as more vaccination sessions take place. Coverage of the Td/IPV teenage booster in the 2018-19 school year 10 was 82.8%.
- Coverage of one dose of MMR vaccine in the 2018-19 school year 10 (age 14-15 years) was 95.1%, coverage of two doses was 91.3%.
- Coverage of one dose of MMR vaccine in the 2018-19 school year 11 (age 15-16 years) was 94.4%, coverage of two doses was 89.9%.

Background

These results are for children living in Wales in December 2018 and reaching their first, second, fourth, fifth and 16th birthdays during the quarter 01/10/2018 to 31/12/2018. Uptake of key immunisations in older children, which are mainly provided through school based programmes in all areas other than Cardiff and Vale University Health Board, are presented in school year cohorts (children reaching their 14th, 15th and 16th birthdays between 01/09/2018 and 31/08/2019). BCG immunisation uptake data are also presented here. For the children referred to in this report, these immunisations would have been given selectively following risk assessment. Coverage of neonatal hepatitis B immunisation in infants at risk is also presented, using data from the Public Health Wales Neonatal Hepatitis B database. MenACWY conjugate vaccine uptake figures for teenagers and young adults born from 01/09/1996 to 31/08/1999, vaccinated as part of the general practice-based catch-up campaign are available from: <http://www.wales.nhs.uk/sitesplus/888/page/88528>

Public Health Wales Vaccine Preventable Disease Programme and Communicable Disease Surveillance Centre, working with Powys Teaching Health Board and the NHS Wales Informatics Service, have recently carried out a COVER data quality assurance project. This project has led to improvements in completeness of vaccination data in the national COVER dataset. The impact is that reported vaccination uptake has increased; primarily in children aged four years and older. National trends in this report for 2015 – 2018 are updated to take into account these changes.

Findings

1. Uptake of all three doses of the combined “6 in 1” DTaP/IPV/Hib/HepB¹ vaccine, scheduled at two, three and four months of age, in children reaching their first birthday was 95.7% this quarter. National coverage of the Td/IPV teenage booster in children reaching 16 years of age was 84.1% (Figures 1, 2 and 3, Tables 2 and 13).
19. Uptake of BCG immunisation is presented in Table 14. These data are based on BCG immunisations recorded in the National Community Child Health Database. BCG immunisation has been received by 6.3%, 4.6%, 7.8% and 4.5% of children reaching their

first, second, fifth and 16th birthdays (respectively) during quarter four of 2018. This quarter Cardiff LA had the highest proportion of children given BCG by one year of age (18.9%) and Swansea LA by two years of age (13.4%).⁵

20. Uptake data for hepatitis B immunisation, extracted from the Public Health Wales All Wales Neonatal Hepatitis B Immunisation Database, is presented in Table 15. Uptake of three doses of hepatitis B vaccine in children who were at risk of perinatal infection and reached their first birthday this quarter was 100.0%. Uptake of four doses of hepatitis B vaccine in children who were at risk of perinatal infection and reached their second birthday this quarter was 66.7%. Uptake of four doses of hepatitis B vaccine in children who were at risk of perinatal infection and reached their fifth birthday this quarter was 92.3%. Proportions should be interpreted with caution as small numbers of babies require an enhanced course of hepatitis B immunisation.

⁵ BCG protects against tuberculosis infection. Numbers of eligible children for BCG are not known.

Comment

This is the second report to include one year old children eligible for the “6 in 1” (DTaP/IPV/Hib/HepB) vaccine which replaced the “5 in 1” (DTaP/IPV/Hib) vaccine in August 2017. Uptake of the complete three-dose course of “6 in 1” vaccine, was high and above 95%, with no apparent negative impact on uptake trends from the change in vaccine. Uptake of all other routine primary immunisations in infants reaching their first birthday this quarter also remain at 95% or higher, excluding rotavirus (which cannot be given beyond 24 weeks of age).

Uptakes of immunisations measured at two years of age were slightly below 95% this quarter, of which uptake of the third scheduled dose of meningococcal group B vaccine was lowest. There has been a consistent gradual decrease in uptake of the first MMR dose in two years olds since 2013 and the last quarter where uptake exceeded 95% was 2017 quarter one. This gradual downward trend since around 2013 is also apparent in data from other UK countries.

During 2018, a comprehensive audit of COVER data was carried out comparing the national COVER dataset and local data in Powys Teaching Health board. Results of this audit suggested an improvement in national data collation procedures that would ensure better consistency between the national dataset and local child health system data, particularly with respect to children who have moved between areas of Wales. The result of this change is that completeness of vaccination history data for children aged four and older has improved and is better matched to local records. Consequently, reported uptake of some vaccinations has increased in four and five year olds, and to a lesser extent older children and teenagers.

Previously published quarterly COVER reports state that the percentage of children who were uptake date with vaccinations by four years of age varied from 84.3% to 86.8% between 2015 and 2018. These figures have been re-calculated following the change in data collation processes and it is estimated that uptake was higher, with the likely quarterly proportion of children who were up to date by four years of age now varying from 86.0% to 88.3%. The reported proportion of children up to date with vaccinations by their fifth birthday is similarly higher at 90.5%. Uptake of two doses of MMR remains the lowest of all immunisations included in this composite measure at four and five years, followed by the “4 in 1” and Hib/MenC vaccines. At an all Wales level, the effect on uptake of the updated process for compiling the national COVER extract was small for teenagers across all immunisations and health boards, apart from MMR.

Uptake of one dose of MMR in 2018-19 School Years 9 and 10 (children reaching 14 and 15 years of age) was above 95% with uptake in School Year 11 at 94.4%. Uptake of two doses remains below 95% for all teenage age groups and health boards.

During 2018 a total of 12,352 cases of measles were reported across 30 EU/EEA Member States with 34 deaths [1]. Suboptimal vaccination uptake leaves the potential for outbreaks following importation of cases from elsewhere in the UK and overseas. There were 20 confirmed cases of measles in Wales in 2018 (provisional data), 15 of whom were associated with an outbreak in early 2018.

¹Data reflects immunisations given and recorded on the Public Health Wales All Wales Neonatal Hepatitis B database of babies born to hepatitis B positive mothers. One year olds in this table would have been eligible for the new Hepatitis B containing "6 in 1" vaccine as part of the routine childhood immunisation schedule. The doses here for one year olds refer to the monovalent dose given at birth (dose 1), monovalent dose given at one month (dose 2) and dose due at two months (dose 3, now part of the "6 in 1" vaccine).
